## DETAILED ACTION

### *Response to Preliminary Amendment*

1. As per Applicant's instructions in Paper 2 as filed on 2/15/02, claims 2-3, 5, 7, 8-9 have been amended and claim 6 has been canceled.

### *Double Patenting*

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321© may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-5 and 7 are rejected under the judicially created doctrine of double patenting over claims 1 and 4-6 of U. S. Patent No. 6,393,055 B1 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows:

Claims 1-5 and 7 recite all as recited, as recited in patented claims 1 and 4-6, recites all. Therefore, the claims 1-5 and 7 have been rejected in view of double patenting.

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application, which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

4. Claims 8-9 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 6,393,055 B1 in view of Egawa et al (5,534,944).

The patent (6,393,055 B1) as described above fails to claim a decoder for decoding intra, predicted, or bi-directional video sequences of pictures, and a switching device including a selecting means provided for a selection of the bit stream to be decoded according to a switching method, and control means for a selective switchover of the bit stream.

However, Egawa et al teaches a method of splicing comprising a decoder (Fig. 4, 420) for decoding intra, predicted, or bi-directional video sequences of pictures, and a switching device including a selecting means (412) provided for a selection of the bit stream to be decoded according to a switching method, and control means (410) for a selective switchover of the bit stream.

Therefore, it would have been considered obvious to a person of ordinary skill in the art employing the Patent (6,393,055 B1) as above to incorporate the concept as taught by Egawa et al so as to effectively improve a method of splicing bit streams in general.

### *Conclusion*

5. The prior art made of record and not relied upon is considered pertinent to Applicant's disclosure.

A) Wells et al (WO 97/08898), Switching between bit-rate reduced signals.

B) Wine et al (6,137,834), Method and apparatus for splicing compressed information streams.
